## SC Defers Telangana's Polavaram Plea | Polavaram by March 2027: Naidu

The Supreme Court on Monday declined to hear the Telangana government's suit challenging Andhra Pradesh's proposed Polavaram-Banakacherla (Nallamalasagar Link) Project, citing procedural deficiencies in the petition. A Bench comprising Justices Vikram Nath and Sandeep Mehta observed that the matter could not be taken up until the petitioner completed the required legal formalities. "This matter cannot be taken up by the court today as there are some deficiencies and formalities to be fulfilled by the petitioner," the Bench said. The court clarified that the Registry would list the matter for hearing once Telangana rectified the procedural defects in accordance with the Supreme Court Rules. Appearing for Telangana, senior advocate Abhishek Manu Singhvi assured the Bench that the deficiencies would be cured

and requested that the case be listed thereafter. The Telangana government has filed the suit under Article 131 of the Constitution, seeking to restrain Andhra Pradesh from proceeding with preparatory and construction-related activities for the proposed river-linking project. The project aims to divert surplus Godavari waters from the Polavaram reservoir to the drought-prone Banakacherla region in Rayalaseema to improve irrigation, drinking water supply and groundwater recharge. Telangana has opposed the project, arguing that it would infringe upon its rightful share of Godavari waters and violate the Godavari Water Disputes Tribunal Award, which governs water allocation among basin States. The State has also contended that Andhra Pradesh cannot unilaterally divert river waters without following the prescribed legal procedures.

This is Telangana's second attempt to challenge the project before the apex court. In January, the State withdrew a writ petition after the Supreme Court indicated that it was not maintainable. At that time, a Bench headed by Chief Justice Surya Kant granted Telangana the liberty to pursue other legal remedies, including filing a suit under Article 131, which deals with disputes between States. The Chief Justice had observed that such a suit would provide a "more comprehensive and effective" remedy since the issue essentially concerns an inter-State river water dispute. Telangana has further argued that the proposed project violates the provisions of the Andhra Pradesh Reorganisation Act, 2014, which envisages cooperative management and equitable utilisation of shared river waters following the bifurcation of the erstwhile united AP.

Andhra Pradesh Chief Minister N. Chandrababu Naidu on Monday announced that the Polavaram Multi-Purpose Irrigation Project will be fully completed and dedicated to the nation by March 2027, describing it as the lifeline of the State. After inspecting the project site and reviewing the progress with officials, Naidu said Godavari water would be released through the Left Main Canal to Anakapalle on August 14, 2026, a day before Independence Day. He said he would personally perform Jalahaarati to mark the occasion. The Chief Minister strongly criticised the previous YSR Congress Party (YSRCP) government, alleging that it had neglected the project. Naidu claimed that when the TDP government left office in 2019, the project had achieved 72 per cent completion, but only

an additional 2 per cent progress was made over the next five years. He accused the previous government of frequently changing contractors, ignoring the recommendations of the Polavaram Project Authority (PPA) and leaving gaps in the Upper Cofferdam, which he said led to the collapse of the ₹440-crore diaphragm wall during floods. According to Naidu, the present government is constructing a parallel diaphragm wall at an estimated cost of ₹990 crore. "There were days when I couldn't sleep after the diaphragm wall was damaged. With the support of the Central Government, the project is back on track," he said. Naidu stated that his government had accelerated construction over the past two years, taking the overall completion level to 89 per cent after adding another 15 per cent progress. He said

around ₹7,100 crore had already been spent on the project, while another ₹3,835 crore is expected from the Centre. The Chief Minister said major components, including the spillway, radial gates and coffer dam, have already been completed. Work on the Earth-Cum-Rock-Fill (ECRF) Dam is progressing steadily, with Gap-1 reaching 48 per cent completion and Gap-2 30 per cent. Land acquisition has covered 94,152 acres so far and is expected to be completed by October 26, he added. Emphasising rehabilitation, Naidu assured full support to project-displaced families, saying justice to them was the government's moral responsibility. According to him, about 17,500 families have already been relocated, 17,118 houses have been completed, and the entire rehabilitation process will be finished by March 2027.

## KTR Alleges Cong-BJP Nexus

Karimnagar, July 13: Bharat Rashtra Samithi (BRS) Working President K.T. Rama Rao (KTR) on Monday accused the Congress government in Telangana of deliberately refusing to utilise the Kaleshwaram Lift Irrigation Project, alleging a political nexus between the Congress and the BJP to discredit the project. Addressing the media after inspecting the Mid Manair Reservoir in Karimnagar district, KTR alleged that the State government was allowing precious Godavari waters to flow into the sea while farmers faced severe irrigation shortages. He claimed Chief Minister A. Revanth Reddy was sacrificing farmers' interests to sustain what he described as a false narrative against

the Kaleshwaram project. KTR urged the government to immediately resume lifting water through the project and warned that the BRS would launch a statewide agitation under the leadership of party president K. Chandrasekhar Rao (KCR) if no action was taken. He alleged that before the Congress assumed office, the Mid Manair Reservoir remained full, but was now drying up due to the government's inaction. According to KTR, lifting water through the Kannepalli Pump House could address both irrigation and drinking water needs at a time when Telangana faces the threat of drought. Accusing the government of acting out of political vendetta against the previous BRS regime,

he said the administration had ignored suggestions from retired irrigation engineers, technical experts and the Opposition. Rejecting the Chief Minister's claim that there was no flood flow in the Godavari, KTR maintained that large quantities of water were flowing downstream daily and were being utilised by neighbouring Andhra Pradesh. He alleged that the Telangana government was deliberately preventing water from being lifted through Kaleshwaram, thereby benefiting neighbouring states at the cost of Telangana farmers. KTR further claimed that nearly 2 TMC of water could be lifted through the Kannepalli Pump House without low-

ering the gates of the Medigadda barrage, but the government continued to cite the National Dam Safety Authority (NDSA) report as an excuse. Describing the report as politically motivated, KTR alleged that it was prepared under the BJP-led NDA government to tarnish Telangana's flagship irrigation project. He also accused the Congress and BJP of working together on the Kaleshwaram issue, pointing out that while the State Irrigation Minister had acknowledged completion of repair works, the gov-

ernment continued to rely on the NDSA report to avoid operating the project. Warning of serious consequences, KTR said continued refusal to utilise Kaleshwaram could trigger a major agricultural and drinking water crisis, especially under prevailing El Niño conditions. He further claimed that unless water was lifted into the Yellampalli Reservoir, even Hyderabad could face drinking water shortages, recalling that under the previous BRS govt, Kaleshwaram had ensured uninterrupted water supply to several regions.

# Growth with Inclusive Prosperity

Economic growth is the foundation of a nation's progress, but growth alone does not guarantee development. The real measure of success lies in how effectively economic expansion improves people's lives through better jobs, higher incomes, quality infrastructure, and greater opportunities. As India aspires to become a developed nation in the coming decades, achieving ambitious GDP targets must go hand in hand with inclusive and sustainable development. Over the past decade, India has emerged as one of the world's fastest-growing major economies. Strong domestic consumption, rapid digitalisation, infrastructure expansion, and policy reforms have strengthened the country's growth trajectory. India is now among the largest global economies and aims to become a \$5 trillion economy in the coming years, with even larger ambitions for the next decade. Achieving these milestones will require sustained high growth, investment, innovation, and productivity improvements. However, GDP figures alone cannot capture the full picture of economic progress. High growth must translate into employment generation, poverty reduction, and improved living standards. Millions of young Indians enter the workforce every year, making job creation one of the country's most urgent priorities. Expanding manufacturing, supporting MSMEs, encouraging startups, and strengthening the services sector will be essential to absorb this growing workforce.

Infrastructure development will remain a key driver of economic expansion. Modern highways, railways, ports, airports, logistics networks, and digital connectivity reduce business costs and improve competitiveness. At the same time, investments in education, healthcare, and skill development are equally important because a productive workforce is the backbone of sustained economic growth. Agriculture, which supports nearly half of India's workforce, must also become more productive and climate resilient. Scientific farming, irrigation expansion, food processing, and better market access can raise rural incomes while strengthening food security. Balanced regional development is equally important to ensure that growth benefits every state and every section of society. The global economy also presents both opportunities and uncertainties. Geopolitical tensions, supply chain disruptions, climate change, and technological transformation demand flexible and forward-looking economic policies. India can benefit from these shifts by becoming a global manufacturing hub, attracting foreign investment, and strengthening exports. Fiscal discipline, policy stability, and ease of doing business will continue to inspire investor confidence. Simultaneously, environmental sustainability must remain central to development planning. Green energy, resource efficiency, and climate-resilient infrastructure can ensure that today's growth does not compromise future. India's GDP targets are not merely economic milestones; they represent aspirations for a better quality of life for every citizen.

# KU Prof Adi Reddy to Receive International Honour

**D**r. RakkiReddy Adi Reddy, Public Relations Officer (PRO) at the University Arts and Science College, Kakatiya University, Subedari, Hanamkonda, has been formally invited to participate in the Fourth International Women's Awards Grand Ceremony and International Conference to be held in Puducherry on July 25 and 26. During the prestigious international event, he will receive an international award in recognition of his outstanding contributions to higher education, academic research, journalism, and public relations. Announcing the invitation, the Principal of the University Arts and Science College, Professor Sunkari Jyothi, expressed immense happiness and pride over the achievement. She stated that the selection of a faculty member from the college for recognition at an international forum is a matter of great honor not only for the University Arts and Science College but also for Kakatiya University as a whole. Such recognitions, she said, reflect the growing global

visibility of the university's academic excellence and research contributions. Professor Sunkari Jyothi recalled that Dr. RakkiReddy Adi Reddy had recently received the Best Research Paper Award at an international conference held in the United States, where his scholarly work was appreciated by researchers and academicians from several countries. His continued recognition at international academic platforms demonstrates his commitment to quality research, innovative thinking, and academic excellence. Over the years, Dr. Adi Reddy has made significant

contributions in the fields of journalism, media studies, public relations, communication research, and higher education. His research papers have been presented at several national and international conferences, and his academic writings have been widely appreciated for addressing contemporary social, educational, and media-related issues. In addition to his academic responsibilities, he has actively contributed to strengthening the public image and outreach activities of the University Arts and Science College through his role as Public Relations Officer. The forthcoming international conference in Puducherry will bring together distinguished academicians, researchers, educationists, policy experts, and professionals from different countries to deliberate on contemporary issues relating to women's empowerment, education, leadership, sustainable development, and social transformation. The conference is expected to provide an excellent platform for academic interaction, exchange of ideas, collaborative research, and interna-

tional networking. The international award being presented to Dr. RakkiReddy Adi Reddy recognizes his sustained contributions to research, academic leadership, professional journalism, institutional communication, and community engagement. His achievements have brought recognition to the institution and have inspired students, young researchers, and faculty members to pursue excellence in teaching, research, and public service. Faculty members, non-teaching staff, students, research scholars, and well-wishers of the University Arts and Science College extended their heartfelt congratulations to Dr. RakkiReddy Adi Reddy on this prestigious international recognition. They wished him continued success in his academic, research, and professional endeavors and expressed confidence that he would continue to bring greater laurels to the college, Kakatiya University, and the State of Telangana through his scholarly contributions at national and international levels.

- Hanamkonda, July 13

# Telangana Readies El Niño Plan: Thummala

Hyderabad, July 13: The Telangana government has prepared a comprehensive three-phase contingency plan to minimise the impact of El Niño and protect farmers from possible drought conditions, Agriculture Minister Tummala Nageswara Rao announced on Monday. The Minister directed officials to remain fully prepared to implement the first phase of the action plan and ensure that farmers do not suffer due to delayed monsoon or prolonged dry spells. Tummala chaired a high-level review meeting at ICRISAT with scientists from the India Meteorological Department (IMD), Professor Jayashankar Telangana Agricultural University, Indian Institute of Oilseeds Research (IIOR), Indian Institute of Millets Research (IIMR), Central Research Institute for Dryland Agriculture (CRIDA) and senior officials from agriculture and allied departments. Scientists presented detailed recommendations on drought-resistant crop varieties, alternative cropping patterns and scientific measures to minimise crop losses under El Niño conditions. The Minister instructed officials to ensure that every scientific recommendation reaches farmers at the grassroots level through district ad-

ministrations and agricultural extension staff. He also directed district collectors and officials of agriculture and allied departments to remain in the field and continuously monitor the situation. According to the Director of Agriculture, the contingency plan has been designed in three phases, considering possible rainfall scenarios up to July 15, July 30 and August 15. Officials estimated that 16.30 lakh quintals of seed would be required if rains are delayed until July 15, 13.82 lakh quintals if delayed until July 30, and 12.70 lakh quintals if drought-like con-

ditions persist until August 15. The government has already initiated steps to ensure adequate seed availability. The meeting also reviewed irrigation water availability, groundwater levels and power supply across the State. Officials informed the Minister that 13 districts have so far received normal rainfall, while 20 districts are facing rainfall deficits. Thummala directed district collectors, agricultural officers and scientists in rain-deficit districts to jointly assess local conditions and take immediate corrective measures. He emphasised the need for a Dynamic District-Specific Re-

sponse (DSR) approach, involving real-time rainfall monitoring, weather-based crop advisories, soil moisture assessment, crop health monitoring, drought-risk analysis, alternative crop planning, soil moisture conservation and crop diversification. The Minister also stressed the importance of co-ordination among various departments, including IMD, Irrigation, Ground Water, Power, Agriculture and Horticulture. He instructed officials to issue a weekly Agro-Weather Bulletin until the end of August, covering rainfall data, weather forecasts, dry spell warnings, temperature trends, soil moisture, groundwater availability, irrigation status, power supply, crop conditions and scientific advisories for farmers. The bulletin will also include updates on reservoir storage, inflows and irrigation water availability, while the Ground Water Department will provide mandal-wise groundwater data and prepare water-use plans. Officials were directed to disseminate the weekly bulletin widely through village panchayats, farmer groups, agricultural extension officers, WhatsApp groups, social media, digital platforms and local media to ensure timely access to scientific information for farmers.

# Trump Eyes Control of Hormuz

Washington, July 13: US President Donald Trump on Monday declared that the United States would take control of the Strait of Hormuz and could permanently oversee its security, accusing Iran of violating a military agreement and continuing drone operations in the strategically important waterway. In an interview with Fox News, Trump said the US had launched fresh strikes on Iranian military assets overnight and warned of further action if Tehran continued its operations. "We're taking over the Strait. They have nothing. They've got nothing," Trump said. Claiming that Iran had suffered heavy losses, he added, "We hit them very hard last night. Every time they send a drone, we hit them very hard. Most of their equipment is gone." Trump also alleged that Iran had backed out of an agreement after lengthy negotiations. "We had a deal. It was a done deal. And then they broke it," he said, claiming Iranian negotiators sought changes after initially agreeing to all terms. According to Trump, the US would now retain control over

the strategic waterway. "We're going to keep the Strait, and we'll probably run it. We'll become the guardian of the Strait. Maybe we'll call it the guardian angel of the Strait," he remarked. The US President further argued that countries benefiting from secure navigation through the Strait should compensate Washington for providing security. "We should be reimbursed for that because the other nations are very wealthy. We've protected it for decades without getting paid," he said. Trump maintained that the United States should no longer bear the financial and military burden alone. "We're going to guard it, and we're going to get paid for guarding it. We just want to be reimbursed for putting our people in danger," he added. The Strait of Hormuz is one of the world's most critical maritime routes, connecting the Persian Gulf with the Gulf of Oman and the Arabian Sea. It serves as a key transit corridor for global oil and liquefied natural gas exports, making its security vital for energy-importing nations, including India.

A hand-drawn illustration of a hand writing on a notepad, with a newspaper clipping of the Tricolour Estate advertisement overlaid on it. The newspaper clipping features the same title 'TRICOLLOUR ESTATE' and 'THE NEWS THAT MATTERS', along with a cityscape image and a list of local news items. A pen is also shown resting on a notepad in the foreground.

# India Script Lord's History

India created history by registering a commanding 270-run victory over England in the first-ever Women's Test match at Lord's, with off-spinner Sneh Rana starring with a match-winning spell of 4/42 on the final day. Defending an imposing target of 457, India bowled England out for 186 in 62.5 overs to complete a comprehensive triumph at the iconic venue. The victory also preserved India's unbeaten record in Women's Test cricket on English soil. Resuming the fourth day at 130/6, England's hopes rested on overnight batter Amy Jones, but India struck early when Rana dismissed the half-century for 54, triggering the collapse. The Indian spin duo of Sneh Rana and Deepti Sharma dominated the morning session, sharing six wickets between them to wrap up the innings. Deepti removed Issy Wong and Lauren Bell, while

Rana claimed the final wicket by clean bowling Sophie Ecclestone, who fought bravely with a maiden Test half-century. Earlier in the match, India laid the foundation with solid batting performances. Smriti Mandhana scored 83 in the first innings and 70 in the second, while Yastika Bhatia scripted history by becoming the first woman to score a Test century at Lord's, making a brilliant 113. Wicketkeeper-batter Richa Ghosh added crucial late runs with an unbeaten 50 off 52 balls, helping India declare at 341/7 in the second innings. Fast bowler Kranti Gaud also played a significant role, claiming the first five-wicket haul by a woman at Lord's during England's first innings. The memorable victory came in the presence of cricket legend Sachin Tendulkar, who addressed the Indian team before play on the final day. ICC Chairman Jay

Shah, BCCI Vice-President Rajeev Shukla, and Secretary Devajit Saikia were also present to witness India's landmark achievement. The win marks India's seventh victory in their last 11 Women's Test matches and underlines the team's growing dominance in the longest format. Brief Scores: India 285 & 341/7 declared beat England 170 & 186 by 270 runs.

## INDIA LEADS THE WORLD IN AI ADOPTION

4 in 5 Indian employees use AI weekly, highest in the world: Report

Insights from ADP Report | July 13, 2026

India is the world's most AI-active workforce across industries, age groups and company sizes.

### AI USAGE IN INDIA

80% of employees use AI multiple times a week

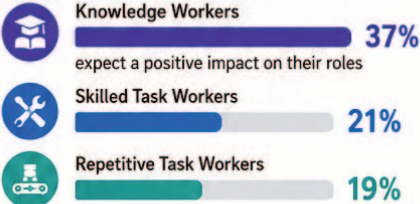

41% of employees use AI daily

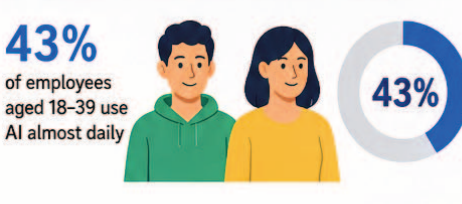

31% believe AI will positively impact their job roles in the next year

### AI OPTIMISM BY JOB TYPE

### YOUNGER WORKFORCE LEADS ADOPTION

### WOMEN ADOPT AI MORE FREQUENTLY

### AI USAGE ACROSS ORGANIZATION SIZES

### FREQUENT AI USERS ARE MORE ENGAGED, LESS STRESSED – BUT QUESTION THEIR PRODUCTIVITY

More engaged at work than non-users

Lower stress levels compared to non-users

More likely to question their own productivity

## India Leads Global AI Adoption

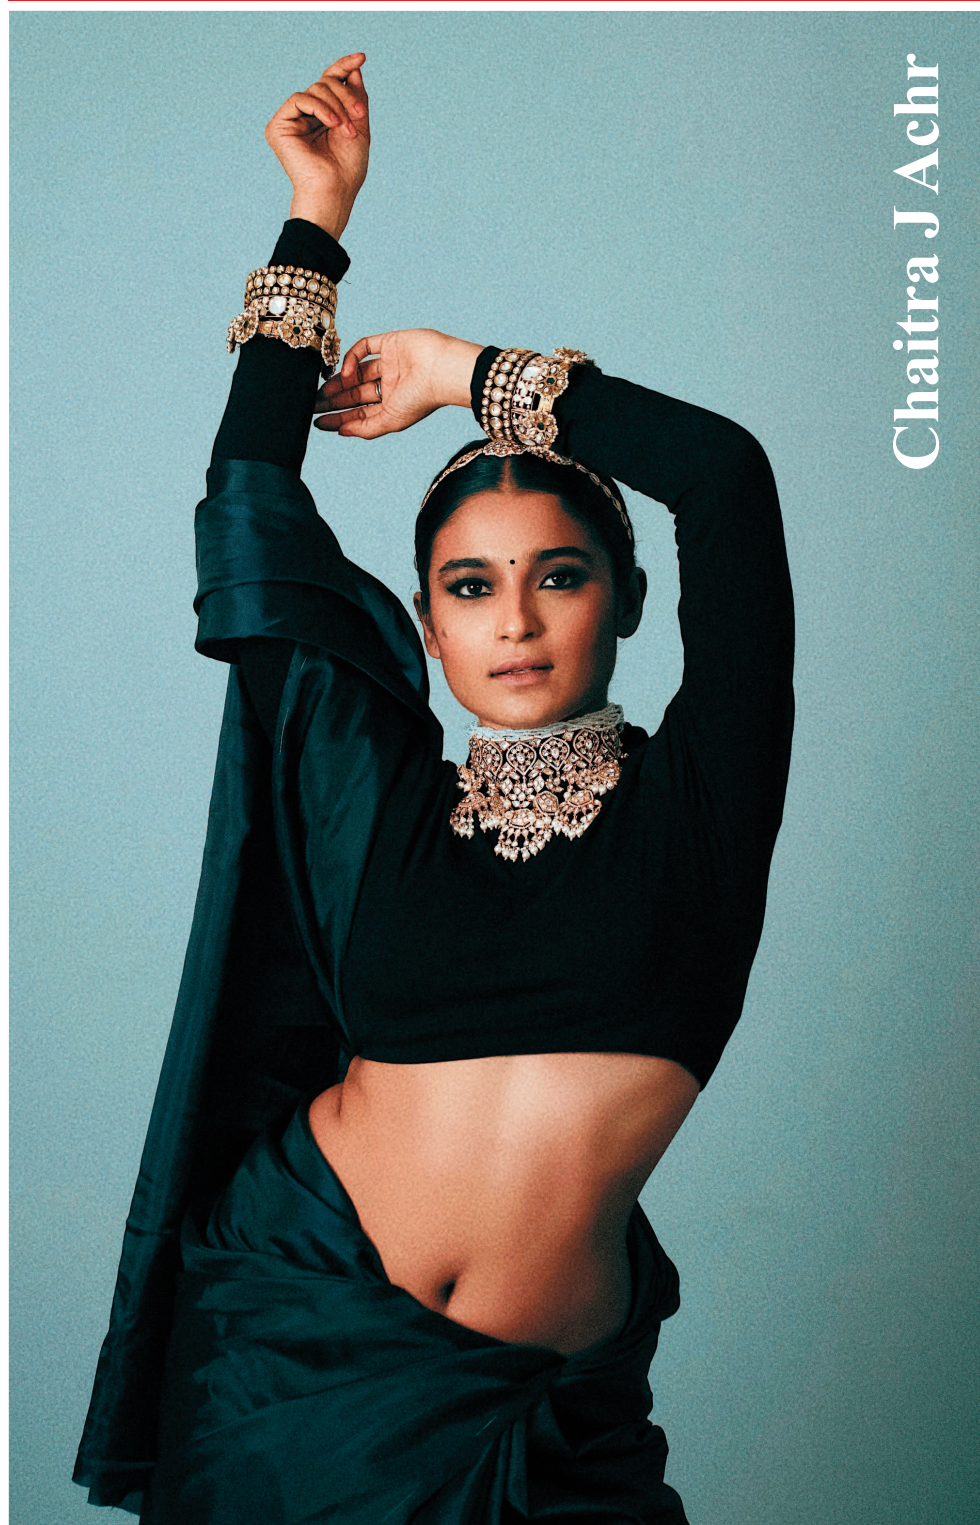

New Delhi, July 13: India has emerged as the world's most AI-active workforce, with 80 per cent of employees using artificial intelligence multiple times a week and 41 per cent using it daily, according to a new report released by ADP on Monday. The report found that Indian employees are among the most optimistic globally about the impact of AI, with 31 per cent believing the technology will positively influence their job responsibilities over the next year. Despite widespread adoption, frequent AI users were found to be more likely to question their own productivity, even though they reported higher workplace engagement and lower stress levels compared to non-users. Knowledge workers expressed the highest confidence in AI, with 37 per cent expecting it to enhance their roles, compared to 21 per cent of skilled task workers and 19 per cent of employees performing repetitive tasks. The report also highlighted strong adoption among younger professionals. About 43 per cent of employees aged 18 to 39 use AI almost every day, making them the leading users of the technology in workplaces. Women were found to be adopting AI slightly faster than men, with 44 per cent reporting daily usage compared to 40 per cent of male employees. AI usage was also significant across organisations of all sizes, with 54 per cent of employees in large enterprises using AI every day. According to the report, India's lead-

ership in workplace AI adoption cuts across industries, age groups and company sizes, reflecting growing acceptance of AI-powered tools in day-to-day work. Rahul Goyal, Managing Director of ADP India and Southeast Asia, said Indian employees were embracing AI faster than their global counterparts. "India's leadership in workplace AI adoption shows

that employees are eager to embrace technologies that can help them work smarter and create greater value," he said. The report emphasised that organisations should now shift their focus from merely encouraging AI adoption to ensuring its effective implementation through proper workforce training, skill development and organisational support.

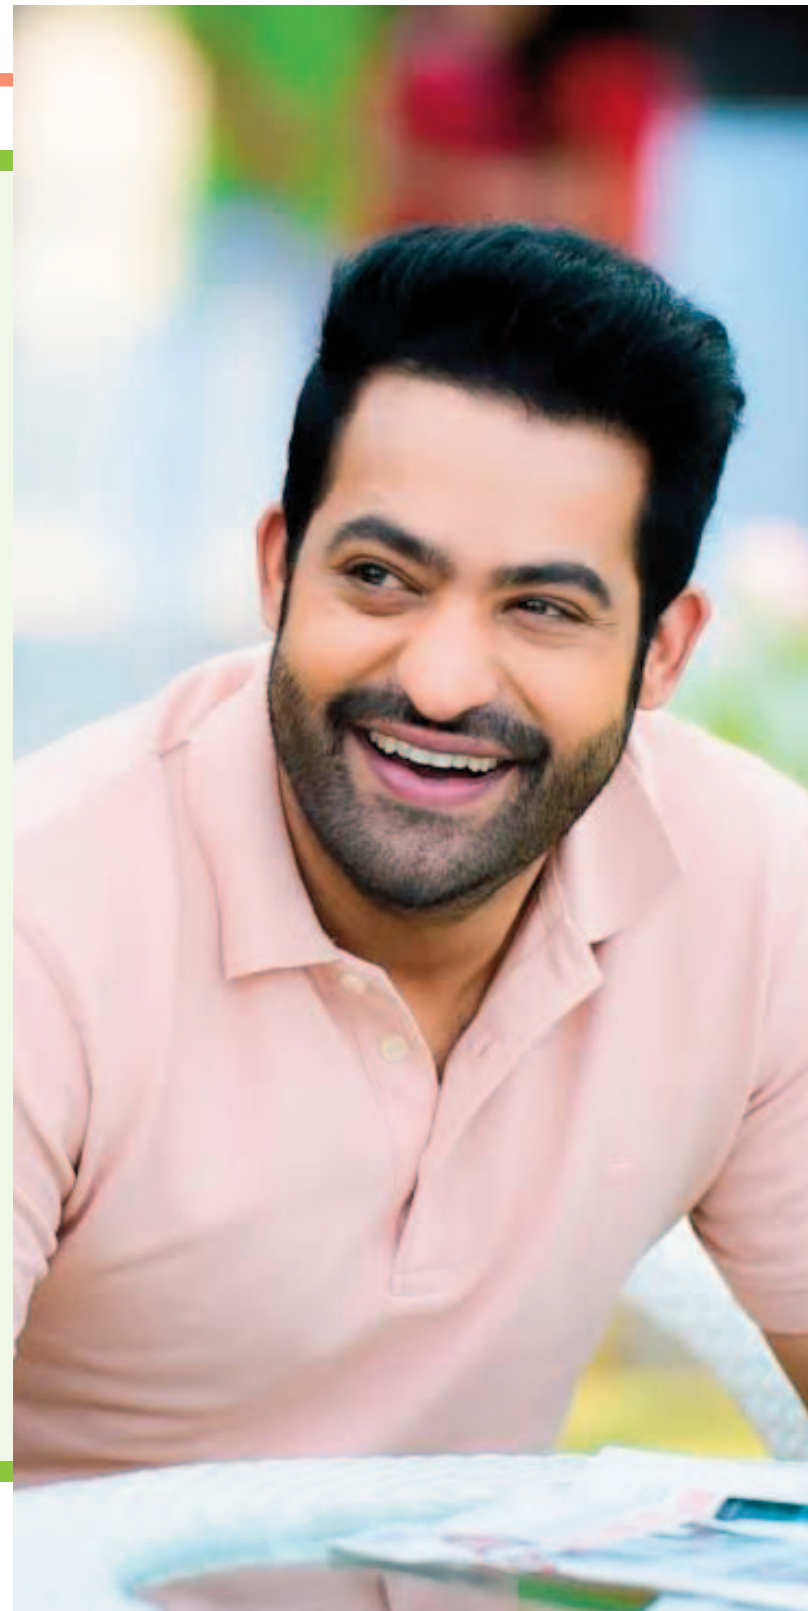

Chaitra J Achr

## Jr NTR Team

### Quashes Political Buzz

Actor Jr NTR's team has firmly dismissed speculation about his entry into politics, clarifying that the event scheduled for July 18 has no political agenda and is solely meant to launch a social initiative titled 'Ooru Vaada'. In an official statement, the actor's team urged fans and the public not to believe rumours circulating on social media about a political announcement. According to the statement, the programme is being organised to introduce the objectives, vision and future roadmap of the 'Ooru Vaada' initiative and has no connection with politics. The clarification comes amid widespread speculation that the pan-India star was preparing to make his political debut. Meanwhile, Jr NTR is busy shooting for his upcoming action film 'Dragon', directed by Prashanth Neel. The film's first-look poster recently received an overwhelming response from fans and movie lovers. The big-budget entertainer is being produced by Hombale Films, the banner behind blockbuster franchises such as KGF and Salaar.

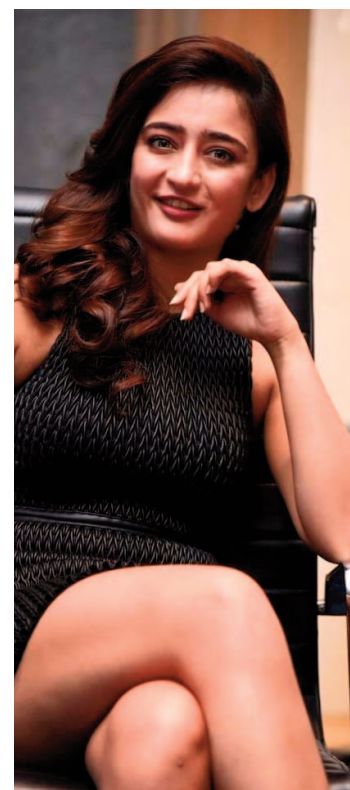

## Nag Ashwin Defends Karna

Director Nag Ashwin has urged audiences to read the Mahabharata carefully amid ongoing debates over the portrayal of Karna in his blockbuster film 'Kalki', whose sequel is currently under production. The discussion resurfaced after a social media user questioned the filmmaker's interpretation of Karna's character in the climax of the first instalment. Responding to the criticism, Nag Ashwin said he remained confident about his creative interpretation and advised people to refer to the Mahabharata, particularly Vivek Debroy's translation, to gain a deeper understanding of the legendary warrior. His response has reignited discussions among mythology enthusiasts, with many believing that the complete context behind Karna's character arc will become clear only after the release of the sequel, where his journey is expected to assume greater significance. Interestingly, there was little debate over Karna's depiction before the release of the first film. The controversy emerged only after audiences witnessed the climax, although many viewers praised the sequence for its emotional impact and narrative strength. In 'Kalki', Prabhas portrays Karna, while Amitabh Bachchan essays the role of Ashwatthama. Both characters are among the most complex figures in the Mahabharata, having fought on the side of Adharma during the Kurukshetra war despite possessing extraordinary abilities and personal virtues.

## Akshara Explores New Depths

Actress Akshara Haasan says her role in the upcoming sci-fi thriller 'Simulacra' demanded a new level of maturity and pushed her to explore unexplored dimensions as a performer. The makers recently unveiled the teaser of the film, introducing Akshara as Nivi in a futuristic world where human memories can be altered, erased or recreated through advanced neural brain chips. Speaking about her character, Akshara said portraying Nivi was unlike any role she had played before. "Nivi is a very different character that I've played. This time I feel it required a different maturity level as a person and therefore a character. With how layered the story is, I discovered a side of me as an actor and got to explore emotions and complexities of emotions colliding. It challenged me as an actor. I truly enjoyed performing the character Nivi," she said. Set in a near-future society driven by advanced technology, 'Simulacra' imagines a world where powerful technology companies allow people to customise, rewrite or permanently erase their memories using neural brain chips. The story follows Nayan, played by Satyajeet Dubey, and Nivi, portrayed by Akshara Haasan, whose lives intersect in a society increasingly dependent on trans-human technology. While Nayan insists they share a deeply personal past and presents photographs stored in his neural memory vault, Nivi has no recollection of him, with her own memory archive completely blank. As Nayan attempts to recreate their shared past, the two gradually develop genuine feelings for one another. Actor Satyajeet Dubey said the film's exploration of reality, identity, relationships and artificial intelligence attracted him to the project. "What intrigued me about 'Simulacra' was the film's exploration of objective and subjective reality, identity, relationships, and how technology increasingly blurs the lines between what's real and what's perceived. Those themes feel very relevant today, especially in the age of AI," he said. Produced by Philosia Films and directed by Pankaj Sawant, 'Simulacra' is scheduled to premiere on Waves OTT on July 17.

## Bundelkhandi Was Toughest: Bhumi

Actress Bhumi Pednekar has revealed that Bundelkhandi was the most challenging language she has spoken on screen, saying she underwent months of training to perfect the dialect for her acclaimed film 'Sonchiriya'. Speaking to Media during the promotion of her 2025 release 'Mere Husband Ki Biwi', Bhumi said she enjoys learning new languages and dialects for her roles but found Bundelkhandi particularly demanding. "I love picking up different languages, but the toughest will have to be Bundelkhandi, which I adopted in 'Sonchiriya'. I had training for that for many months," she said. Released in 2019, 'Sonchiriya' featured the late Sushant Singh Rajput, Ashutosh Rana, Ranvir Shorey, and Bhumi Pednekar in key roles. Directed and co-written by Abhishek Chaubey, the film is set in the Chambal region and revolves around a gang of dacoits who call themselves "Baaghis" (rebels). The movie was notable for using the Bundeli dialect throughout its dialogues to lend authenticity to its rural setting. The film was jointly produced by RSVP Movies and MacGuffin Pictures, with Vashu Bhagnani, Jacky Bhagnani, and Deepshikha Deshmukh among the producers. Bhumi was most recently seen in 'Mere Husband Ki Biwi', directed by Mudassar Aziz, alongside Arjun Kapoor and Rakul Preet Singh. The romantic comedy also featured Shakti Kapoor, Anita Raj, Dino Morea, and Aditya Seal in supporting roles. Despite its ensemble cast, 'Mere Husband Ki Biwi', which released in theatres on February 21, 2025, failed to make an impact at the box office. The film featured cinematography by Manoj Kumar Khato, editing by Ninad Khanolkar, and music composed by John Stewart Eudri.
